

# Business Plan Solar Energy Services

Supported By

#### **Industrial Overview**

#### About Product/Service

- Solar Energy systems convert sun's radiation into electrical energy. It can be stored in a battery (Off- Grid) or can be fed back to the grid (Grid Connected)
- With the ever increasing demand of electricity, the pressure on existing power infra is increasing & it is not sufficient to meet the demands of every citizen
- Solar energy systems provide an efficient way to get 24\*7 uninterrupted power supply even in the most remote part of the country.
- The govt has set ambitious targets of solar energy capacity addition & thus provides enough subsidies as well to encourage common people

#### Challenges & Competitors Analysis

- There is not much competition in the business of providing solar consultancy services as the awareness in people is quite low & people think it to be extremely expensive as compared to power supply from regular grid
- The challenge is to make people understand the long term benefits of installing solar panels.
- It provides the customer with self sufficiency & reduces dependency on the govt regulated grid which are extremely erratic & unreliable.
- Solar Energy is extremely dilute form of energy & requires large space
- Solar Energy depends on the amount of solar irradiation & if the region does not get sufficient sun light then project may not be financially viable
- Solar energy plant installation required highly skilled technicians to decide the location, orientation, tilt of solar modules & output may decrease if these are not optimum
- Panels require timely cleaning & shadow free space for maximum output

#### **Future Potential**

- The govt encourages & is laying a lot of emphasis on the adoption of solar power plants
- A lot of R&D is going on for the equipments required for installing a plant
- The prices of solar panel have reduced in the last 1 decade.
- Govt has launched PLI schemes to encourage the production of modules in India & reduce the dependency on China for the import of modules that will further reduce the cost of solar modules.
- The efficiency of panels has led to a reduction in the space required for

#### Value Chain of Business

Below is the journey map for the entrepreneur for all the process that are involved in the consultancy business. The processes involved may vary depending on the size of business, items dealt with, specific requirements of the stakeholders

involved

## Setting up the office

Procuring Equipments for demos in the office

## Marketing &

Generating leads

# Access Client's requirement & procure equipments

### Installing Plant & AMC

- A well furnished office needs to be set up to attract prospective clients.
- The office can be located at a place where there are high number of people interested in getting a plant on their roof tops
- The office should have ample space to showcase some models of solar modules, invertors, etc

- Procure equipments like different types of modules, invertors for the demo purpose to the clients
- In the later stages, the premise may be used to sell solar modules as well when the demand picks up
- Marketing is critical for the business to thrive as the awareness among people is low.
- Carious marketing practices like
- Flexes
- Banners
- Influencers like electricians & linemen may be utilized for spreading awareness
- Articles/Advertisements may be published in the newspaper to attract people
- B2B sales with commercial organizations

- Site inspection is required after which we can decide the capacity of the system to be set up
- Advice the client as per requirement for off Grid or Grid connected system
- Vendor may need to inform customer about any modifications required in the site for showdown free area
- After all discussions, procure the necessary material.
- Get the quality checked if other stakeholders are also involved

- Post installation, necessary safety precautions are to be taken & approvals from concerned authorities is required.
- Apply for subsidy as well if eligible
- For continuous stream of revenue, selling AMC is necessary
- Timely cleaning of dust & bird dropping is required.
- Also ensure shadow free area for the module to get maximum output

Business Plan for Solar Energy Consultancy

#### Target Consumer & Marketing Plan

#### Target Consumer/Market

- The target audience for this business will be residential buildings, shops, public & private institutes
- In rural areas, farmers can be encouraged to use solar pumps for irrigation which can provide access to huge market
- In the urban areas, apart from these, large institutes & industries, factories, residential complexes etc. with wide roof area can be potential customers

#### Marketing Plan

#### **Product**

- Delivering the service of end to end installation of roof top solar panel to domestic, commercial, industrial clients.
- Procuring the equipments as per site requirement & installing them on the site.
- Getting safety approvals from all the necessary organisation & then finally applying for subsidy.

#### **Price**

- Price the products competitively, taking into account the purchasing power & paying capacity of the rural/urban customer base.
- Huge margins may not be possible to due price sensitivity of the public
- Value based pricing may be used considering the returns earned in the long term from the respite of freedom from paying high & ever increasing power bills

#### **Place**

- Awareness has to be created in the prospective clients through online marketing.
- Sales can be done through social media, e-mails, phone calls or direct interaction with huge clients
- Social media platform like Instagram, IndaiMart, Urban Clap need to be leveraged in the urban areas for leads
- In rural areas, word of mouth marketing may be leveraged

#### Promotion

- Big boards outside farm & in different parts of the village mentioning all the benefits of eggs & ethical treatment of hens will also be helpful.
- Face to face visits & interactions and building relations specially for B2B sales
- Word-of-mouth marketing in villages is majorly suggested in initial phase of business.

#### Equipments to be Installed

Panels & structure are to installed as per site & client requirement. Different types of Modules are available like monocrystalline, polycrystalline. Height of iron structure can be 3' to 6' depending upon the obstacle present in the vicinity

Inverters are needed to convert the DC output of the panel to the AC which can then be used by the owner or can be fed in the grid. Efficiency of inverter is critical as inefficient ones may damage the load equipments Inverter can be string or central inverter

Battery & Battery charger are required for off grid systems. The excess energy generated is stored in the battery for use at a later time. Battery charger is required to control the enregy being fed to the battery to avoid any over charging of the battery

#### **Financial Calculations**

#### **Initial Investment Calculation**

# Initial Investment Cost Office Premise Purchase 500000 Tools for installation work 50000 Batteries, Invertos for office demos 30000 Total 580000

#### Operational Cost Calculation

Fix Cost	Cost
Labour	20000
Office expenses	5000
EMI	10000
Total	35000

Operational Cost			
Modules @ 20/W	60000		
Invertor, 3KW	30000		
Switch Board	5000		
Energy Meter	6500		
Cables @35/mtr	5000		
Iron Structure @Rs 70/kg	12000		
Total	118500		
Subsidy	30000		
Net cost	88500		

#### **Revenue Calculation**

Assuming a payback period of 4.5 years for the client with earlier monthly bill of 2000/month				
Annual Power Bill	=12*2000 = 24000			
Power Bill for 4.5 year	= 4.5*24000=108000			
Bid to the client by the vendor	= 108000			

Revenue earned by the vendor = Rs 1,08,000 from every job done.

For more information visit: <a href="http://vigyanashram.com/">http://vigyanashram.com/</a> Or Contact: +91-7774073920

#### **Financial Calculations**

The business must sell minimum of 2 job per month to remain at no profit no loss situation

#### **Break-Even Calculation**

Fixed Cost	35000			
Operational Cost for 2 jobs after subsidy	88500			
Revenue	108000			
Contribution Margin	19500			
Break Even Sales	1.79			
BreakEven Days	26.92			
Profit Per Month	4000			
Annual Profit	48000			

#### Payback period calculation

Initial Investment	80000		
Profit Per month	4000		
Months required to recover initial investment	20		
Return on Investment would be	5 %		

#### **Cash Flow Analysis**

	Initial		Variable			
	Investment	Fix Cost	cost	EMI	Revenue	Profit
Year 0	-80000					
Year 1		-300000	-2124000	-120000	2592000	48000
Year 2		-300000	-2124000	-120000	2592000	48000
Year 3		-300000	-2124000	-120000	2592000	48000
Year 4		-300000	-2124000	-120000	2592000	48000
Year 5		-300000	-2124000	-120000	2592000	48000
Year 6		-300000	-2124000	0	2592000	168000
Year 7		-300000	-2124000	0	2592000	168000

#### **Assumptions:**

- 1. 1kW requires 100sq. ft shadow free space
- 2. Average monthly generation= 116 unit/kw
- 3. Domestic Connection with load requirement of 3KW

- 4. Loan = 500000 for 5 years at 8%
- 5. Assuming 2 Jobs per month

For more information visit: <a href="http://vigyanashram.com/">http://vigyanashram.com/</a>

Or Contact: +91-7774073920

#### Sources of Funding & Government Support Available

#### Legal requirements

- Initially Company registration is required along with MSME, GST, Udyam Aadhaar number & PAN card for business
- On later stage further electrical safety licensing is required but at start no major licenses are required.

#### Government Support available (Major Schemes available)

- Pradhan Mantri MUDRA Yojana (PMMY)
- Stand Up India Scheme
- National Bank for Agriculture and Rural Development (NABARD)
- Credit Guarantee Scheme (CGS)
- Coir Udyami Yojana
- Special provisions for loans to women entrepreneurs e.g. Udyogini

#### **Funding Sources**

- Self-Financed
- Loan available from Family and Friends
- Loan from local banks like Co-operative Banks, SHGs
- Loan under various Govt Schemes
